MATAM SRINATH SWAMY

B.Sc Data Science Student | Data Analyst | AI & ML Enthusiast
msrinath9700@gmail.com | +91 8712327124 | Hyderabad
github.com/srinath9121 | linkedin.com/in/srinath-swamy/

CAREER OBJECTIVE

Data Science Undergraduate with a strong academic foundation and practical exposure to Machine Learning, Deep Learning, and analytics through real-world projects and internships. Proficient in Python and end-to-end model development, with a methodical approach to problem-solving and a keen interest in translating data into meaningful insight.

EDUCATION

Bhavan's Vivekananda College *2023 – 2026 | Hyderabad*
B.Sc Honors in Data Science | CGPA: 7.87

Sri Chaitanya Junior Kalasala *2021 – 2023 | Hyderabad*
Intermediate, MPC | Percentage: 81.2%

TVR Model High School *2020 – 2021 | Hyderabad*
SSC | CGPA: 10

EXPERIENCE

UNP Education *June 2025 – October 2025 | Virtual Internship*
Data Science Intern | Python | Machine Learning

- Performed EDA, data cleaning, and visualization to extract insights from real datasets and support informed decision-making.
- Built and evaluated machine learning models and contributed to improving prediction efficiency.
- Presented analytical findings in structured reports and collaborated with peers to refine project outcomes.

PROJECTS

Indian Macro Terminal | FastAPI | React 18 | WebSockets | Three.js | Docker | Render

- Built an institutional macro intelligence platform connecting Indian markets, macroeconomic indicators, and global geopolitical data.
- Integrated machine learning anomaly detection to uncover irregular market patterns and systemic trends.
- Engineered real-time data streaming and interactive 3D and financial data visualizations using WebSockets and Recharts.

Sky-Image Fusion for Solar PV Ramp Prediction (Final Year Project) | PyTorch | ResNet-18 | LSTM | Hugging Face

- Developed a multimodal deep learning system combining sky-camera imagery with time-series power data to forecast abrupt solar generation drops 10 minutes ahead.
- Implemented a hybrid ResNet-18 visual feature extractor and LSTM temporal model, achieving an R^2 of 0.950 and boosting severe-ramp recall from 47.7% to 80.5%.

Airline Passenger Satisfaction Prediction | Python | Machine Learning | XGBoost

- Built an end-to-end pipeline (EDA, preprocessing, and model benchmarking) predicting passenger satisfaction across thousands of flight records.
- Evaluated Logistic Regression, Random Forest, SVM, and XGBoost; achieved best performance with XGBoost (ROC-AUC ~0.91, F1 ~0.87).
- Identified travel class, seat comfort, and inflight service as key satisfaction drivers over departure delays through feature importance analysis.

SKILLS

Programming Languages: Python, Java, C, SQL, R
Frameworks & Libraries: PyTorch, Scikit-Learn, FastAPI, React 18, XGBoost, Pandas, NumPy
Web: HTML, CSS, Next.js
Tools: Excel, SPSS, Tableau, Git & GitHub, MATLAB, Jupyter Notebook, Docker
CS Fundamentals: DSA, DBMS, OOPS, OS (Linux, Windows)
Soft Skills: Leadership & Management, Public Speaking, Attention to Detail
Languages Known: English, Hindi, Telugu

CERTIFICATIONS

- Data Analytics with Python – NPTEL
- Introduction to ML – NPTEL
